

Elevate Public Safety with Gambit ID Scan

The partnership between Gambit ID and Iron Bow Technologies leverages Gambit ID's advanced wireless solutions and Iron Bow's expertise in IT and communications to deliver comprehensive, cutting-edge technology solutions for law enforcement and government agencies.

Why take on the hassle of another gadget when a simple app on your phone will do?

Gambit ID SCAN has a user-friendly front-end app that allows the operator to easily target the anatomical source, aim the camera and verify that a solid image (whether fingers or face) was captured.

Key Use Cases

Rapid Fingerprint Analysis

Instantly capture and analyze fingerprints during stops and investigations, improving response times and accuracy.

Latent Fingerprint Insights

Gain immediate, actionable intelligence from latent fingerprints to support critical decision-making in real time.

Sophisticated Facial Recognition

Leverage advanced facial recognition technology for swift and reliable identification.

Enhanced Biometric Data

Utilize the contactless feature to obtain a 180-degree edge-to-edge image, providing significantly more data than conventional contact scanners for superior accuracy and detail.

Streamlining Public Safety Operations

EFFICIENCY REDEFINED

Reduce the need for bulky equipment and integrate Gambit ID Scan seamlessly into existing workflows, boosting operational efficiency and convenience.

LIGHTWEIGHT INNOVATION

Replace cumbersome gear with a mobile, lightweight solution that enhances performance without adding physical burden.

PROVEN RELIABILITY

Developed for military special operations forces, Gambit ID Scan has proven its effectiveness in high-stakes missions where accuracy, ease of use and speed matter.

ROBUST SECURITY MEASURES

Operate within a CJIS-compliant ecosystem featuring two-factor authentication. Records are securely managed with immediate deletion of non-matching and confirmed records, and matches are reported back and integrated into arrest documentation.

Cutting-Edge Security and Compliance

CJIS-Compliant Operations

Secure transactions begin with two-factor authentication, configurable at the agency level. Once a search is completed and confirmed, records are promptly deleted from the device, ensuring stringent data protection. Non-matching records are also deleted, with successful matches reported back and included in arrest documentation for comprehensive record-keeping.

Discover the Power of Gambit ID Scan

Experience how Gambit ID Scan can revolutionize your public safety operations with state-of-the-art technology designed for unparalleled efficiency, accuracy, and data management. Iron Bow is your go-to next-generation solutions provider helping customers across government, public safety, and education access the latest-cutting edge technologies to achieve their missions.
